Authorized Summary of the BESA Seal of Approval for Monitor from the Protect Pro Series

The BESA tests carried out by IFVBESA on behalf of the company IPC Europe UG on the energetic and physical effectiveness of *Monitor* from the Protect Pro product line clearly showed that *Monitor* is able to:

1. Generate biologically significant electromagnetic interference in the fields of mobile communications and neutralize them
2. Convert negative fields into biologically positive and valuable fields and to show corresponding protection effects.

All BESA tests were carried out according to the requirements for BESA projects or according to the manual for the BESA Seal of Approval and the BESA concept.

Result:

For existing technical interference fields in the subject's environment,

including 5G, *Monitor* created a significant harmonization of these fields and conversion of them creating optimal measurements in all body parts and systems tested regardless of the strength of the interference fields.

Before and after tests on the human organism (metabolism) demonstrated:

- Magnetic field interference in the vicinity of smartphones in transmission mode including 5G loads
- Technical (electromagnetic) interference fields caused by the operation of cell towers
- Technical interference caused by WIFI, GPS, induction radiation and other technical office equipment
- Technical interference fields from various power lines and electrical consumption

Further tests confirmed *Monitor* neutralized biological interference fields from water-vein radiation, faults and breathing points on the earth and converted them into positive biological energy for the organism.

The positive effect of *Monitor* showed no undesirable side effects by:

- Tests of undesired effects by overlaying with other products from the "HI Energy" product range from IPC Europe UG
- Tests for proof of effectiveness even with the highest, self-overlapping magnetic interference (two simultaneous phone calls)

Result from the BESA Tests:

Because of the **positive results** of the **bioenergetic and the biological effect** of the **Monitor Protect Pro series** product tested, IPC Europe UG met the **requirements** for **receiving the BESA Seal of Approval** from the

International Association for BESA.
