Authorized Summary To the project P50 1.3.2 for the Test object „Cell“

The BESA tests carried out by IFVBESA on the bio-energy-informative and physical effectiveness of the test object "Cell" have clearly shown that "Cell" is able to neutralize biologically significant stress factors from EMSF especially 5G, as presented in the project, in the meridians or at the acupuncture points of the test person through its protective effect. Via the bioenergetic system analysis, the effect of the above mentioned stress factors on the test person, his meridian system and his energy-informative- biological control circuits was questioned and systemically tested on the bio-energy-informative level. The BESA tests BEFORE - AFTER show significant changes at the tested acupuncture points on the meridian system of the test person. The measurement data as well as their key figures impressively confirm on the one hand the stresses that occur on the human organism, and on the other hand clarify how the protective factors unfold and the deregulating energies are transformed into body-immanent and biocompatible energies through the application of the test object "Cell".

result:

The test subjects were brought into contact with heavy EMSF during the BESA AFTER testing. In contrast to the BEFORE testing, in which the test object was not used, positive measurement results were found throughout, indicating that neutralization of the energy-informative system had taken place. The regulation dynamics developed into an optimal effective range through the application of both technologies.

The following positive changes could be proven in a before-after test on the human organism (metabolism).

- magnetic field disturbances in the environment of mobile radio devices in the transmission mode of 5G
- technical (electromagnetic) interference fields caused by the operation of mobile phone masts (cars)
- technical interference fields caused by W-Lan, GPS, induction radiation and other technical office equipment
- technical interference fields from various power lines and electrical consumers could be neutralized or transformed into the positive biological energy for the organism.

By demonstrating the bio-energy informative effectiveness of the test object "Cell" in this overall project P50 1.3.2, the requirements for obtaining a BESA seal of approval were upgraded from 3 to 5 stars by the International Professional Association for BESA.
