Authorized Summary

Detail project P50 2.2 to the BESA seal of quality

Human Protect SD 9-1

The BESA tests carried out by IFVBESA on the energetic and physical effectiveness of the test object, the "Human Protect SD 9-1", have clearly shown that this test object is able to neutralize or harmonize biologically significant stress factors such as EMIF's, EMIF's in a car of the upper middle class, radioactive radiation or geopathic interference fields at the acupuncture points of the test persons. Via the bioenergy-informative system analysis, the effect of the above-mentioned stress factors on the test persons, their meridian systems and their energy-informative-biological control circuits was questioned and systemically tested on the energy-informative level. The BESA tests BEFORE - AFTER show significant changes at the tested acupuncture points at the meridian system of the test persons. The measurement data as well as their key figures impressively confirm, on the one hand, the stresses caused by the tested factors on the human organism and, on the other hand, clarify how, after application of the test object, the "Human Protect SD 9-1", the deregulating energies are transformed into body-immanent and biocompatible energies.

From a holistic point of view, it may be assumed that the positive effect on the test subjects also occurs in other people. That the positive influence by the "Human Protect SD 9-1" is actually possible with high precision is clearly shown by this test through the BESA-PRE-AFTER-AFTER comparison. All measured values improved significantly from the mostly 100% blue measuring range to the green, mostly 50 Skt. range (Skt = scale value), i.e. the range of optimal measured values. This means that an optimal regulation dynamic has taken place. Here, in the sense of IFVBESA, one can clearly speak of an optimal, significant improvement of the body's own energy situation.

Result:

The test persons were brought into contact with the mentioned stress factors during the BESA BEFORE test in each case in order to prove the effect of the test object. In contrast to the BESA BEFORE tests, in which the test object, the "Human Protect SD 9-1", was not used, positive measurement results were found throughout, indicating that neutralization or harmonization had taken place. The regulation dynamics developed into an optimal effective range.

By demonstrating the energy informative effectiveness of the test object
"Human Protect SD 9-1" in this detail project P50 2.2,
the requirements for obtaining a BESA seal of approval by
the International Professional Association for BESA were met.
